

## REACH Statement

Nässjö, Januari 24, 2025

### Laws and Executive Orders

Lead is a pollutant that, like many other chemicals, has been classified as an SVHC. The production, distribution and use of these SVHCs is administrated by the regulations (EC) 1907/2006 (REACH) of the European Parliament and the Council of the European Union.

### Statement of compliance

The purpose of the REACH-Regulation is to ensure a high level of protection for human health and the environment when articles contain substances of very high concern (SVHCs).

To ensure this objective, REACH restricts or limits the use of certain substances and mixtures in the manufacture of various products. These regulations, including the latest publication of the ECHA approval and candidate list, which increased the number of SVHCs from 242 to 247 (acc. to candidate list dated 21-jan-2025), have been observed and taken into account in all our affected business areas.

As a downstream user, we are only partially affected by the REACH regulation, but we adhere to the part of the requirements that apply to us without exception, including changes that may affect us and/or our deliveries. However, we do not incur any obligations arising from the production, distribution and registration of substances and mixtures.

After reviewing all the external product information and examining our manufacturing process data, we confirm to the best of our knowledge and belief that the products delivered do not contain any SVHCs above the limit of 0.1% w/w and no SVHCs listed in the regulations were intentionally used in our manufacturing processes or intentionally added to the final product.
